

Update: Introducing "Flappy Bebek" Game

After discussing with our community and with the Community Manager of ICP Hub Indonesia, we have identified a fantastic opportunity to develop a game inspired by "Flappy Bird."

We are excited to announce "Flappy Bebek," a game that combines fun gameplay with meaningful integration of ICP Hubs. Below are the details of the game mechanics:

Gameplay Mechanism

- **Objective:** Keep the duck (Bebek) in the air and avoid obstacles.
- **Scoring:** Each obstacle passed earns the player one point, which can be converted to one Bebek coin.
- **Daily Claim Limit:** Players can claim up to 100 Bebek coins per day.
- **Weekly Leaderboard:** High scores earn extra prizes in Bebek coins and ICP tokens.

ICP Hub Integration

1. Obstacle Design:

- **Country Flags:** Use flags of countries with ICP Hubs as obstacles.
- **Information Pop-up:** When a player hits an obstacle, display information about the corresponding ICP Hub, including activities, events, and special features.

2. Special Events:

- **Weekly Degen Games:** Host special events during weekly degen games of ICP Hubs (Indonesia, Thailand, Poland, etc.).
- **Event Bonuses:** Offer additional rewards and bonuses during these events to encourage participation.
- **Global Degen Event:** Organize a weekly degen event for all ICP Hub members globally, fostering a sense of community.

3. Leaderboard and Representation:

- **Hub Representation:** Players can choose their ICP Hub representation, which will be displayed on the leaderboard.
- **Flappy Olympics:** Turn the leaderboard into a Flappy Olympics, where Hubs compete against each other. Track and display the highest-scoring Hubs and individual players.

Tokenomics Update

In our original whitepaper, we allocated 50% of the total supply for the launch airdrop and 25% for a post-launch airdrop. To enhance the longevity and value of BEBEK Coin, we propose inverting these numbers:

- **Launch Airdrop:** 25% of the total supply.
- **Post-Launch Airdrop:** 50% to be earned through gameplay in "Flappy Bebek."

This adjustment will slow the release of tokens to the market, potentially increasing the token's value and providing long-term excitement for players.

We are currently in discussions with game developers and plan to partner with BoomDAO to include "Flappy Bebek" on their platform, making it accessible to gamers worldwide.

We plan to adopt this updated whitepaper and make the announcement public after winning the competition. Being included in the top 5 and receiving guidance to secure an ICP grant will be pivotal for the development of "Flappy Bebek."

Thank you for your support 🙌
and let's quack our way 🦆
to the moon! 🌕🚀
